Professional Summary

Computer Science undergraduate (Data Science) with 6 production-ready applications including a freelance MERN-stack e-commerce platform (50+ products, Razorpay, Cloudinary CDN), a CNN-based crop disease classifier (94% accuracy), and a remote patient vitals monitoring system (50 concurrent users). Proficient in Python, JavaScript, SQL, MongoDB, TensorFlow, and AWS. Seeking Software Engineer, Data Scientist, ML Engineer, or Full-Stack Developer roles.

Education

SRM Institute of Science and Technology, Chennai, TN

2022 – 2026

B.Tech in Computer Science and Engineering (Data Science); CGPA: 7.8/10

Bhashyam Junior College, Guntur, AP

2020 – 2022

Class XII (MPC); Percentage: 78.4%

Indus High School, Kurnool, AP

2020

Class X (SSC); Percentage: 92.1%

Skills Summary

Languages: Python, C++, C, SQL, PHP, HTML, CSS

ML & Data Science: TensorFlow, Keras, Scikit-learn, Pandas, NumPy, OpenCV, CNNs, Deep Learning, Model Evaluation, Hyperparameter Tuning, Data Cleaning, Data Visualization

Databases: MongoDB, MySQL, Database Design, Query Optimization, Normalization

Cloud & DevOps: MongoDB Atlas, Git, GitHub

IoT & Embedded: ESP32, Arduino, Raspberry Pi, MAX30102, MQTT, I2C, SPI, Embedded C

Engineering Practices: OOP, DSA, SDLC, Agile

Certifications

AWS Academy ML Foundations – AWS (2024): SageMaker, model evaluation metrics, cloud deployment

Google Data Analytics Capstone – Google (2024): cleaned 50K+ rows, 12 Tableau visualizations

Arduino & Embedded Systems – Udemy (2023): 15+ projects, I2C/SPI/UART

Raspberry Pi IoT – Udemy (2023): GPIO, MQTT, AWS IoT Core

Technical Experience

Deep Learning Engineer – Potato Leaf Disease Detection System

Sep 2024 – Jan 2025

Python, TensorFlow, Keras, OpenCV, Flask, Git

Remote

- Developed a CNN-based potato leaf disease detection system using TensorFlow and Keras for accurate classification of plant diseases.
- Applied image preprocessing and data augmentation techniques to improve model generalization and reduce overfitting.
- Optimized model architecture and training parameters to enhance prediction accuracy and support precision agriculture applications.

IoT Full-Stack Developer – MedConnect Remote Patient Monitoring Platform Feb 2025 – May 2025

Arduino, C++, Python, PHP, MySQL, CSS, HTTP, HTML, Git

Remote

- Built an IoT-based health monitoring platform using IOT sensors for real-time patient vitals tracking.
- Integrated M.L models to analyze health data and generate predictive insights for patient monitoring.
- Developed a secure web dashboard with authentication and real-time visualization of patient health metrics.

Full-Stack Developer – MittsuThreads E-Commerce Platform

Nov 2025 – Present

React.js, Node.js, Express.js, MongoDB, REST API, Razorpay, Cloudinary, AWS, Git

Remote

- Engineered a full-stack e-commerce platform with product management, inventory tracking, and responsive UI.
- Implemented secure authentication, role-based access control, payment gateway integration, and scalable REST APIs.
- Designed MongoDB database architecture and admin dashboards for analytics, order management, and business operations.

Additional

- **Hackathon Finalist (Top 10/200+):** OODP Hackathon 2023 - Built a Java/MySQL inventory system with ACID transactions and OOP design patterns.
- **LeetCode:** Solved 150+ DSA challenges (120 LeetCode, 25 HackerRank, 15 InterviewBit) with 1,650+ contest rating; proficient in arrays, DP, trees, graphs.
- **ISTE Member:** ISTE Member – Active participation in technical society events and workshops.
- **Operations Head, DSA Club SRMIST:** Led a 15-member team to organize 8 events (500+ attendees); introduced a digital registration system improving operational efficiency by 20%.
- **Technical Exhibitor:** Presented 2 ML projects at the SRMIST Department Exhibition to 500+ visitors; received faculty "Best Implementation" commendation.
